

MATERIALS AND THEIR PROPERTIES

Everything around us is made from different kinds of materials.

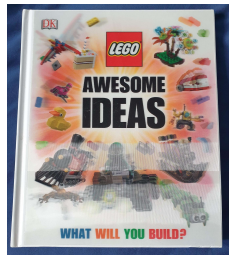

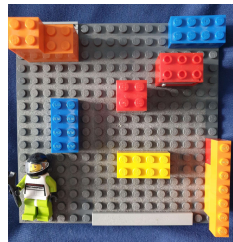

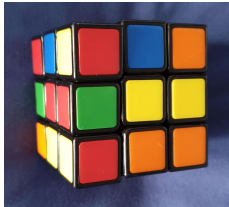

Some things are made of GLASS. Glass is made by heating sand and chemicals together. It is strong and clear but shatters easily.

Circle the pictures that show something made with glass.

Some things are made of PLASTIC. Plastic is made from oil. It is strong and can be made into any coloured shape.

Circle the pictures that show something made with plastic.

Some things are made of WOOD. Wood comes from trees and is strong and flexible.

Circle the pictures that show something made with wood.

Some things are made with METAL. They are found in the ground and sometimes mixed with rocks. They are strong, hard and shiny.
Circle the pictures that show something made with metal.

Some things are made with FABRIC. They are fibres woven together, for example wool.
Circle the pictures that show something made with fabric.

**Now try and find some
objects in your home made
with these materials.
Have fun and good luck!**
