

# The life cycle of a Butterfly

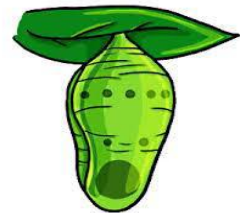

**1.** The female Butterfly lays her eggs on a plant or leaf.

**2.** A Caterpillar will hatch from the egg. This is also known as a larva. The Caterpillar eats lots of leaves and grows bigger.

**3.** The Caterpillar builds itself a home on a leaf or twig, this is called a Pupa or Chrysalis and it stays inside and begins to change and grow.

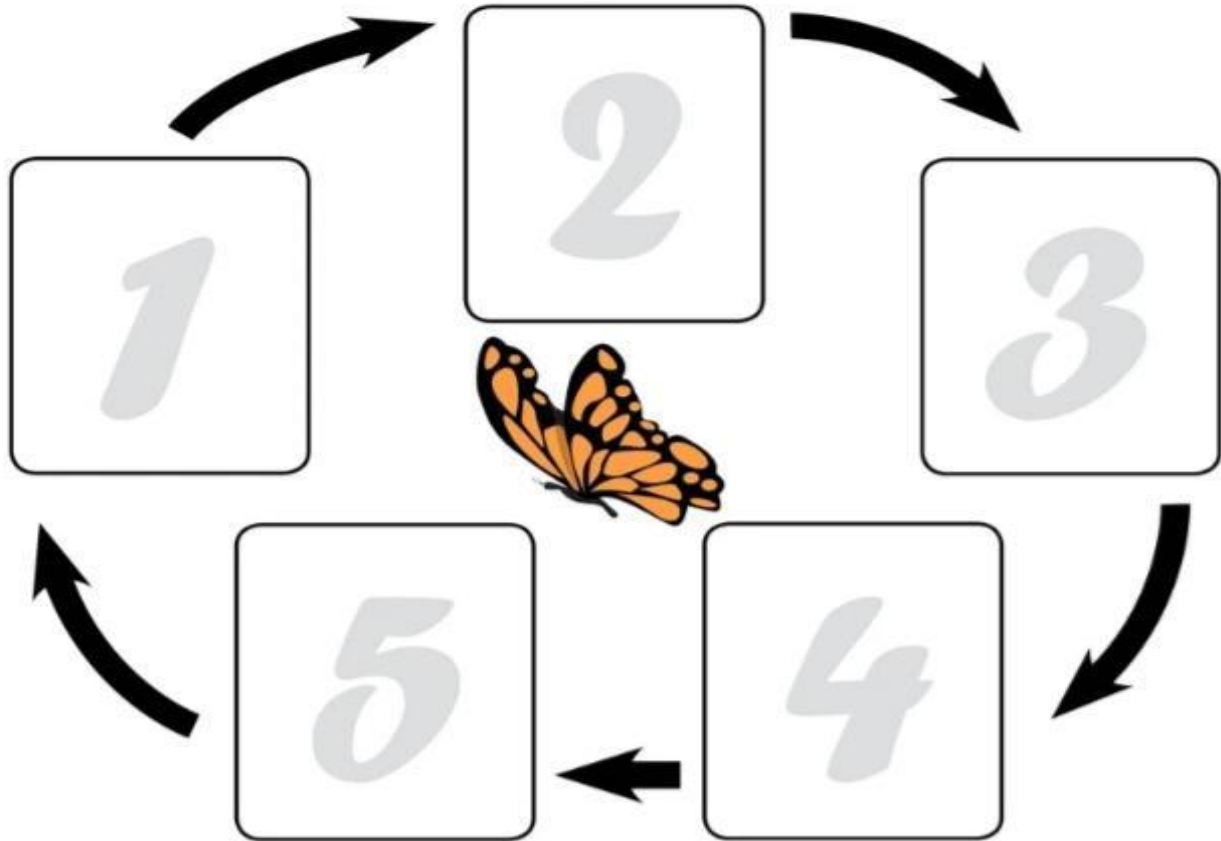

**4.** When the Caterpillar has stopped changing and growing, it comes out of the Chrysalis.

**5.** The Caterpillar is now a Butterfly.
